Gone are the days of the 70-page report that’s heavy on the academics and short on the “what does this mean for me and my organization?” SHRM’s research department has a brand-new function and feel—and you are going to like it. You can look forward to information that is brief, meaningful and engaging. “Snackable,” if you will.

We’re talking:

- Infographics
- Interactive Online Tools
- Videos
- Social Posts
- Executive Summaries (you know, the short ones)

And there is SO much more. The surveys, the research, the data.

It’s all a part of why SHRM is THE leading resource for human resources.

Connect with SHRM Research and build strong business cases, rooted in data.

**We’ll help advance your organization and your career.**
And it’s for ALL levels of HR professionals.

Don’t believe us? Here are the types of questions we provide answers to:

What are the top three reasons employees leave their company?

- Compensation
- Benefits
- Job Security

72% of females and 57% of males cite THIS as the top factor contributing to their job satisfaction.

Cue the Aretha. R-E-S-P-E-C-T

How did you enter the HR profession?

48% “fell” into the profession (See? You’re not alone).

Job satisfaction is high. That means people are less likely to leave the organization, right?

Not necessarily. 40% of employees are likely to look for another job this year.

We’re thinking about developing a succession plan. How many organizations have one?

44% And your organization should too.

Do companies pay a premium to employees who work holidays when the office is usually closed?

Yes. 57% of companies do.

What percent of organizations use E-verify for new hires?

66%

Do organizations have policies or procedures specific to big data?

30% Yes
45% No
25% ????

What are the top sources of big data used by organizations?

- 76% HRIS databases
- 73% Employee surveys
- 59% Employee application data
- 59% Performance management systems

What is the main reason organizations are not using big data?

Lack of expertise needed to compile, analyze and interpret data
